

Tami Griffith

Tami Griffith is Science and Technology Manager, U.S. Army Research and Development Engineering Command (RDECOM) at the Simulation Training and Technology Center.

Tami Griffith has the genuine pleasure of conducting research into the use of games and virtual worlds for learning as a Science and Technology Manager for the U.S. Army Simulation and Training Technology Center. She initiated the Federal Virtual World Challenge; which invites mass collaboration to expand current Federal Government capabilities in virtual worlds. She has been a leader in extending the Army into various virtual environments and is currently exploring ways to improve a user's sense of presence using a low-cost off-the-shelf technology including Brain Computer Interfaces.
